#What is GNU+Linux?
Just like Windows, iOS, and Mac OS, GNU+Linux is an operating system. In fact, one of the most popular platforms on the planet, Android, is powered by the GNU+Linux operating system. An operating system is software that manages all of the hardware resources associated with your desktop or laptop. To put it simply, the operating system manages the communication between your software and your hardware.

#Reasons to use Linux
*Reason 1(Kernel:This is the one piece of the whole that is actually called linux)
*Reason 2(Daemons:Background services)
*Reason 3(Applications:Thousands of high-quality software that are easy to install)
